

1. Fundamentals of Power System Analysis
2. Design and Simulate Electrical Power System Using ETAP 19.5 Software
3. Creating New Project in ETAP
4. Understanding ETAP Software Overview & Toolbars
5. Create Single Line Diagram in ETAP With Conventional Modelling Method & Auto-Build (Time Saving)
6. Load Flow Analysis - Theory, Comparison of Hand Calculations and ETAP Results
7. Load Flow Analysis Example
8. Cable Sizing Analysis
9. Transformer MVA Sizing
10. Generator Load Sharing
11. Transformer X/R Ratio Calculation
12. Short Circuit Analysis - Theory, Comparison of Hand Calculations and ETAP Results
13. Short Circuit Analysis - Vendor Type Testing of Medium and Low Voltage Circuit Breaker (IEC Standard)
14. Short Circuit Analysis Example
15. Protection Coordination (Relay Coordination) Analysis - Theory
16. Protection Coordination Analysis Example
17. Protection Coordination Analysis - Auto Star Evaluation
18. Arc Flash Analysis Fundamentals Using IEEE:1584-2002 Standard
19. Arc Flash Analysis Example
20. Motor Starting Analysis
21. Motor Starting Analysis Examples
22. Transient Stability Analysis
23. Transient Stability Examples - Load addition/rejection, 3-Phase fault, Under-Frequency Load Shedding etc.
24. Harmonic Analysis & Example
25. Ground Grid Analysis & Example
